

# PolicyPak Enterprise EDITION

The most value to organizations seeking management and security.

**PolicyPak Enterprise Edition comes with every pak, every solution, and priority support & training – everything is included!**

PolicyPak Enterprise Edition has you covered no matter how your users access their desktops. IT administrators are responsible for managing a heterogenous mixture of desktops, laptops, virtual desktops, domain-joined devices, non-domain joined machines, and more in today's hybrid environment. It's nearly impossible to standardize and stabilize management and security policies across all these channels without PolicyPak.

## KEY FEATURES

### MANAGEMENT

Standardize and maintain Windows 10 application, OS and browser settings.

### SECURITY

Remove local admin rights, prevent malware, and secure browsers, apps, and Windows 10.

### AUTOMATION

Keep software and patches updated. Use triggers and actions to increase user efficiency and reduce manual effort.

### REPORTING

Verify your goals get implemented across all Windows 10 machines, in and out of the office.

## POLICYPAK WITH YOUR ACTIVE DIRECTORY

Secure computers joined with Active Directory using Microsoft Group Policy. Microsoft Group Policy is a powerful technology you rely on day after day, but it needs a boost to meet your modern enterprise's management, security, reporting, and automation needs. Utilizing PolicyPak with your Active Directory enables organizations to extend the power and capabilities of Group Policy inexpensively and quickly.

## POLICYPAK WITH YOUR MDM PROVIDER

Using PolicyPak with your MDM provider simplifies how you manage and secure enrolled computers with any MDM provider (Microsoft Intune, VMware Workspace ONE, etc.) Increase your settings coverage to 100% of what on-prem Group Policy provides. Increase Autopilot ROI with additional management and security for ongoing Windows 10 rollouts. MDM enables users to travel with non-domain-joined computers easily, but its technology may not meet your management, security, and compliance standards. Instead of requiring remote users to VPN into the domain, quickly and efficiently use your MDM provider as the method to deliver PolicyPak settings and extend your MDM provider's native management and security capabilities. Combine with Autopilot to roll out Windows 10 machine's settings and security exactly right the first time.

## POLICYPAK WITH YOUR UNIFIED ENDPOINT MANAGEMENT

Using PolicyPak with your endpoint management solution enables you to deploy additional powerful management and security policies from the convenience of your existing investment. Microsoft Endpoint Manager (MEMCM), Quest KACE, and PDQ Deploy do a great job deploying software and getting inventory. However, they can't deploy the management and security policies your users' desktops need to maintain efficiency, security, and compliance. PolicyPak fixes this problem by enabling IT administrators to deploy real Microsoft Group Policy settings plus PolicyPak's additional settings directly through your unified endpoint management solution.

## POLICYPAK WITH YOUR VDI

PolicyPak simplifies how you manage and secure settings for virtual applications and virtual desktops. PolicyPak works with the VDI platforms you already use (like Citrix, VMware, and WVD). VDI simplifies the way users access corporate resources, but management and security policy frameworks don't always play nicely with the virtualization platform your organization uses. PolicyPak fixes this by enabling IT administrators to apply the same policies to applications and desktops in a virtual environment as they would in an on-premises environment.

## POLICYPAK CLOUD SERVICE

PolicyPak Cloud service simplifies how you manage and secure domain-joined or non-domain-joined computers using a cloud-based management console. Microsoft Group Policy provides unrivaled control over desktop computers, and the cloud offers unparalleled flexibility to work anywhere, anytime. PolicyPak Cloud service gives you the power to deploy Microsoft Group Policy settings from a cloud-based management console and enables you to deliver all of PolicyPak's extra settings to increase security and manageability for Windows 10 beyond what Microsoft's Group Policy can do.

## USE CASES

### KILL LOCAL ADMIN RIGHTS

Kill local admin rights while still allowing users to perform the work they need to do. Prevent ransomware and unknownware.

### ENABLE REMOTE WORK

Deploy software, manage local admin rights, prevent malware, manage browsers, filter websites, manage applications, and enhance security.

### MANAGE NON-DOMAIN-JOINED DEVICES

Deliver real Microsoft Group Policy settings to your remote and non-domain-joined machines.

### SIMPLIFY GROUP POLICY

Consolidate legacy GPOs, group multiple policies into single objects, and use granular targeting for physical and virtual desktops.

### MANAGE BROWSERS AND JAVA

Map the right browser to the right website, block users from visiting specific URLs, simplify Java security, compatibility, and licensing.

### SIMPLIFY VDI MANAGEMENT

Work with desktop virtualization platforms like Windows Virtual Desktop, Citrix Virtual Apps & Desktop, and VMware Horizon to make managing and securing virtualized Windows environments easier and more efficient.

### SIMPLIFY WINDOWS 10 MANAGEMENT

Manage file associations, Start Screen and Taskbar customizations, and Windows 10 features in any environment.

### TRANSITIONING GROUP POLICY TO MDM

With PolicyPak, you don't have to hunt down and find obscure OMA-URI configurations. Deploy real Microsoft Group Policy settings using your favorite MDM provider.

# THE PAKS

## POLICYPAK LEAST PRIVILEGE SECURITY PAK

Specific applications and system processes require local admin rights to run, but delegating local admin rights to standard users presents significant security and compliance risks to your organization. Without the proper controls on user permissions, it is extremely easy for hackers and cybercriminals to infiltrate your network. With two versions to choose from, the PolicyPak Least Privilege Security Pak can meet any organization's security and compliance requirements for least privilege management. PolicyPak prevents the risk of malware, ransomware, and noncompliance by delegating only the permissions standard users need without impacting productivity.

## POLICYPAK APP DELIVERY & PATCHING PAK

Working from home on a full-time or part-time basis is the new normal for Windows users worldwide. Still, most legacy infrastructures don't have the management and delivery capabilities to ensure remote workers stay up-to-date on applications and their patches. The PolicyPak App Delivery & Patching Pak secures your work-from-home and remote work environments at scale by enabling you to deploy software over the internet and automatically keep it updated. By providing you the flexibility to deliver applications and patches outside of the corporate domain, you can ensure greater security, compliance, and productivity.

## POLICYPAK APPS, BROWSERS & JAVA SECURITY PAK

End-users interact with applications, browsers, and Java more than any other resource on the Windows network, so locking down their settings is critical for security and compliance. PolicyPak Browser & Java Security Pak lets you secure settings and prevent users from reconfiguring once you put them in place.

## POLICYPAK WINDOWS 10 MANAGEMENT PAK

When you need to customize the Start Screen for the accounting group or customize PDF file extensions for the marketing group, configuring Windows 10 settings is critical for accelerating productivity. The PolicyPak Windows 10 Management Pak makes it easy to control, deploy, and customize native Windows 10 desktop settings. If continuous helpdesk calls or Windows 10 misconfigurations impact your organization, this Pak is right for you!

## POLICYPAK DESKTOP AUTOMATION & CONNECTIVITY PAK

Automate desktop processes and Windows OS configurations so that you can accelerate user productivity, prevent help desk calls, and reduce your workload. PolicyPak Desktop Automation Pak enables you to automate the desktop settings that slow users down. Automate the creation of VPN and Always On VPN connections, the creation of RDP files for remote connectivity, and how/when printers and drives are mapped.

## POLICYPAK GPO REDUCTIONS & TRANSITIONS PAK

Group Policy is used by companies to manage and secure their Windows infrastructure. Over the years, issues like GPO sprawl, mergers/acquisitions/divestitures, employee turnover, and new organizations have made it nearly impossible to manage it effectively. The PolicyPak GPO Reduction and Transitions Pak eliminates sprawl and simplifies management by consolidating legacy and future policies into fewer objects. By reducing the number of managed objects, your organization will achieve greater productivity, higher security, better uptime, and fewer misconfigurations.

## POLICYPAK GPO COMPLIANCE PAK

Deploying and managing Group Policy settings is difficult, but ensuring that the policies you've deployed work as they should in a scalable way is challenging and risky without the right tools. Unless you have a centralized way to determine that policies made it to the endpoint, you're in the dark and might be noncompliant with critical regulations. With the PolicyPak GPO Compliance Pak, you'll be able to aggregate resultant set of policy reports (RSOP) for all computers and put them in a simple, insightful, and unified report.

# INTEGRATIONS

## ACTIVE DIRECTORY

Easily apply policies at the user, group, OU, or domain level.

## GROUP POLICY

Reduce the complexity of GPOs. Add capabilities to Group Policy to simplify management, security, automation and reporting.

## WINDOWS 10

Manage and secure Windows 10 from internal and external threats.

## MANAGE BROWSERS & JAVA

Control, manage, and secure Edge, Chrome, Firefox, and Internet Explorer along with all versions of Java.

## PDQ DEPLOY

With PolicyPak you can increase your management of PDQ Deploy applications and keep machines organized and secure.

## ALL MDM SERVICES

PolicyPak works with Microsoft Endpoint Manager (Intune), VMware Workspace ONE, Citrix CEM, and more!

## MICROSOFT ENDPOINT MANAGER

Microsoft Endpoint Manager and PolicyPak deliver modern management to keep your data secure, in the cloud and on-premises.

## WINDOWS VIRTUAL DESKTOP

Deploy virtual desktops with WVD, manage user profiles with FSLogix, and manage and secure settings with PolicyPak.

## CITRIX

Simplify Windows 10 and application settings for Citrix Endpoint Manager, Citrix Virtual Apps, Citrix Virtual Desktops, and more!

## VMWARE

Simplify, fix, and control issues around UAC prompts, Windows 10 File Associations, Start Screen & Taskbar, enterprise applications, browsers, and more!

**PolicyPak.**  
SECURING YOUR STANDARDS.

## ABOUT POLICYPAK

PolicyPak is a modern desktop management platform for the “anywhere” workforce. PolicyPak provides a powerful policy creation, management, and deployment framework that extends the policy management, security, automation, and reporting capabilities found within Windows Active Directory, unified endpoint management solutions, MDM solutions, virtualization platforms, and the cloud. PolicyPak includes Paks, each with its own set of customizable policies that enable IT and teams to solve today’s most significant desktop management challenges like remote work, Windows 10 management, GPO sprawl, ransomware, Group Policy management, and more. PolicyPak lowers IT costs, increases security and compliance, reduces the number of GPOs, and puts the IT admin back in charge. PolicyPak has hundreds of customers, over a million deployed seats, is an Inc. 5000 recognized company, and a G2 Crowd High Performer. For more information, visit [www.PolicyPak.com](http://www.PolicyPak.com) or follow us on Twitter @policypak.
