

# PolicyPak SaaS EDITION

Use PolicyPak Cloud service to centrally manage and secure remote and on-prem customers, and teams using the same policy framework.

PolicyPak SaaS Edition is 100% cloud based with monthly billing – ideal for MSPs, IT teams, and managing your non-domain joined computers.

PolicyPak SaaS Edition is the ideal solution for service providers and enterprises who manage remote teams. Its monthly billing model and cloud-based management console make it the perfect option for managing your “all-in-cloud” workforce. Nearly every Pak is included in SaaS Edition, with the option to extend the platform with new add-on Paks as they are released.

## KEY FEATURES

### MANAGEMENT

Standardize and maintain Windows 10 application, OS and browser settings.

### SECURITY

Remove local admin rights, prevent malware, and secure browsers, apps, and Windows. 10.

### AUTOMATION

Keep software and patches updated. Use triggers and actions to increase user efficiency and reduce manual effort.

### REPORTING

Verify your goals get implemented across all Windows 10 machines, in and out of the office.

## POLICYPAK CLOUD SERVICE

The PolicyPak Cloud Service simplifies how you manage and secure domain-joined or non-domain-joined computers using a cloud-based management console. Microsoft Group Policy provides unrivaled control over desktop computers, and the PolicyPak Cloud Service offers unparalleled flexibility to work anywhere, anytime. The PolicyPak Cloud Service unites these two concepts by giving you the power to deploy real Microsoft Group Policy settings from a cloud-based management console. The PolicyPak Cloud service also enables you to deliver all of PolicyPak's extra settings to increase security and manageability for Windows 10 beyond what Microsoft's Group Policy, any MDM tool, or any RMM tool can do.

## 100% CLOUD

The PolicyPak Cloud Service is a SaaS solution that gives you anywhere, anytime flexibility to manage and deploy policies, regardless of whether an endpoint is domain joined or non-domain-joined. With the PolicyPak Cloud Service, you don't need Active Directory, Azure AD, or even an MDM service to manage and secure corporate endpoints.

## MONTHLY BILLING

Like other SaaS solutions, the PolicyPak SaaS Edition gives you the flexibility to pay as a monthly subscription. There's no need to sign large multi-year contracts or commit to annual renewals because the PolicyPak Cloud Service lets you scale and budget at your own pace.

## PERFECT FOR MSPS AND DISTRIBUTED IT TEAMS

The PolicyPak SaaS Edition enables managed service providers (MSPs) to create, deploy, and manage policies for multiple customers, quickly and easily, and from the convenience of a web-based cloud interface. Enterprises with distributed teams and remote workers benefit from a web-based interface that offers far more policy management flexibility and power than AD/AAD or an MDM solution.

## FLEXIBLE LICENSING

Licensing users with the PolicyPak Cloud service couldn't be easier! You simply pay for what you use. Additionally, you can apply and remove licenses from endpoints whenever you want. Licenses are never married to an endpoint because we want you to have the flexibility to manage endpoints as you need to.

## NO ACTIVE DIRECTORY REQUIRED

Some organizations don't use Active Directory, but you may still need to manage distributed users as an MSP or remote IT team. PolicyPak SaaS Edition provides PolicyPak for Cloud solution that enables IT professionals to create, manage and deploy real GPOs plus PolicyPak's extra policies without Active Directory.

## USE CASES

### KILL LOCAL ADMIN RIGHTS

Kill local admin rights and still allow users to perform the operations on their machine that they need to in order to do their work. Prevent ransomware and unknownware.

### ENABLE REMOTE WORK

Deploy software, manage local admin rights, prevent malware, manage browsers, lightweight web filtering, application management, and security.

### MANAGE NON-DOMAIN-JOINED DEVICES

Deliver real Microsoft Group Policy settings to your remote and non-domain-joined machines.

### SIMPLIFY GROUP POLICY

Consolidate legacy GPOs, group multiple policies into single objects, and use granular targeting for physical and virtual desktops.

### MANAGE BROWSERS AND JAVA

Map the right browser to the right website, block users from visiting specific URLs, simplify Java security, compatibility, and licensing.

### SIMPLIFY VDI MANAGEMENT

Work with desktop virtualization platforms like Windows Virtual Desktop, Citrix Virtual Apps & Desktop, and VMware Horizon to make managing and securing virtualized Windows environments easier and more efficient.

### SIMPLIFY WINDOWS 10 MANAGEMENT

Manage file associations, Start Screen and Taskbar customizations, and Windows 10 features in any environment.

### TRANSITIONING GROUP POLICY TO MDM

With PolicyPak, you don't have to hunt down and find obscure OMA-URI configurations. Deploy real Microsoft Group Policy settings using your favorite MDM provider.

## POLICYPAK LEAST PRIVILEGE SECURITY PAK

Specific applications and system processes require local admin rights to run, but delegating local admin rights to standard users presents significant security and compliance risks to your organization. Without the proper controls on user permissions, it is extremely easy for hackers and cybercriminals to infiltrate your network. With two versions to choose from, the PolicyPak Least Privilege Security Pak can meet any organization's security and compliance requirements for least privilege management. PolicyPak prevents the risk of malware, ransomware, and noncompliance by delegating only the permissions standard users need without impacting productivity.

## POLICYPAK APP DELIVERY & PATCHING PAK

Working from home on a full-time or part-time basis is the new normal for Windows users worldwide. Still, most legacy infrastructures don't have the management and delivery capabilities to ensure remote workers stay up-to-date on applications and their patches. The PolicyPak App Delivery & Patching Pak secures your work-from-home and remote work environments at scale by enabling you to deploy software over the internet and automatically keep it updated. By providing you the flexibility to deliver applications and patches outside of the corporate domain, you can ensure greater security, compliance, and productivity.

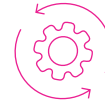

## POLICYPAK APPS, BROWSERS & JAVA SECURITY PAK

End-users interact with applications, browsers, and Java more than any other resource on the Windows network, so locking down their settings is critical for security and compliance. PolicyPak Browser & Java Security Pak lets you secure settings and prevent users from reconfiguring once you put them in place.

## POLICYPAK WINDOWS 10 MANAGEMENT PAK

When you need to customize the Start Screen for the accounting group or customize PDF file extensions for the marketing group, configuring Windows 10 settings is critical for accelerating productivity. The PolicyPak Windows 10 Management Pak makes it easy to control, deploy, and customize native Windows 10 desktop settings. If continuous helpdesk calls or Windows 10 misconfigurations impact your organization, this Pak is right for you!

## POLICYPAK DESKTOP AUTOMATION & CONNECTIVITY PAK

Automate desktop processes and Windows OS configurations so that you can accelerate user productivity, prevent help desk calls, and reduce your workload. PolicyPak Desktop Automation Pak enables you to automate the desktop settings that slow users down. Automate the creation of VPN and Always On VPN connections, the creation of RDP files for remote connectivity, and how/when printers and drives are mapped.

## POLICYPAK GPO TRANSITION & DELIVERY PAK

Group Policy is used by companies to manage and secure their Windows infrastructure. Over the years, issues like GPO sprawl, mergers/acquisitions/divestitures, employee turnover, and new organizations have made it nearly impossible to manage it effectively. The PolicyPak GPO Reduction and Transitions Pak eliminates sprawl and simplifies management by consolidating legacy and future policies into fewer objects. By reducing the number of managed objects, your organization will achieve greater productivity, higher security, better uptime, and fewer misconfigurations.

# POLICIES

## LEAST PRIVILEGE MANAGER

Kill local admin rights. Elevate and bypass UAC only on applications that need it. Stop malware in its tracks.

## JAVA RULES MANAGER

Quickly create and deploy Java deployment rule sets using Group Policy.

## APPLICATION SETTINGS MANAGER

Manage nearly everything in Firefox, Chrome, and Java JRE.

## BROWSER ROUTER

Control browser choice in a multi-browser environment.

## ADMIN TEMPLATES MANAGER

Deliver real Windows 10 and custom ADMX settings to your Windows 10 machines.

## FEATURE MANAGER

Quickly add or remove Windows classic features and Windows 10 optional features.

## FILE ASSOCIATIONS MANAGER

Quickly manage computer and user side file associations.

## START SCREEN & TASKBAR MANAGER

Quickly dictate which applications should go into which Windows 10 Start Screen groups.

## VPN MANAGER

Create Always On VPN connections in an instant.

## RDP MANAGER

Easily create .RDP files on the desktop.

## SCRIPTS & TRIGGERS MANAGER

Run scripts with user or system rights, interactively or silent. Launch scripts based on specific triggers.

## REMOTE WORK DELIVERY MANAGER

Install software and keep it updated automatically.

**PolicyPak.**  
SECURING YOUR STANDARDS.

## ABOUT POLICYPAK

PolicyPak is a modern desktop management platform for the “anywhere” workforce. PolicyPak provides a powerful policy creation, management, and deployment framework that extends the policy management, security, automation, and reporting capabilities found within Windows Active Directory, unified endpoint management solutions, MDM solutions, virtualization platforms, and the cloud. PolicyPak includes Paks, each with its own set of customizable policies that enable IT and teams to solve today’s most significant desktop management challenges like remote work, Windows 10 management, GPO sprawl, ransomware, Group Policy management, and more. PolicyPak lowers IT costs, increases security and compliance, reduces the number of GPOs, and puts the IT admin back in charge. PolicyPak has hundreds of customers, over a million deployed seats, is an Inc. 5000 recognized company, and a G2 Crowd High Performer. For more information, visit [www.PolicyPak.com](http://www.PolicyPak.com) or follow us on Twitter @policypak.
